Board of Trustees
Arkansas Local Police and Fire
Retirement System
Little Rock, Arkansas

Dear Board Members:

Submitted in this report are the compiled results of the annual actuarial valuations for the Arkansas Local Police and Fire Retirement System (LOPFI). The date of the valuation was December 31, 2024.

This report was prepared at the request of the Board and is intended for use by the Retirement System and those designated or approved by the Board (including employers participating in LOPFI). This report may be provided to parties other than the System only in its entirety and only with the permission of the Board. GRS is not responsible for unauthorized use of this report.

The purposes of the valuation are to measure the funding progress in relation to the actuarial cost method and to determine the employer contribution rate for the Fiscal Year beginning January 1, 2026. These measurements were made in accordance with the basic financial objective of the Arkansas Local Police and Fire Retirement System (LOPFI): to establish and receive contributions which, expressed as a percent of active member payroll, will remain approximately level from generation-to-generation and when combined with present assets and future investment return will be sufficient to meet the financial obligations of LOPFI to present and future benefit recipients. Calculations required for compliance with the Governmental Accounting Standards Board (GASB) Statements No. 67 and No. 68 has been issued in a separate report.

This report should not be relied on for any purpose other than the purposes described herein. Determinations of financial results, associated with the benefits described in this report, for purposes other than those identified above may be significantly different.

Results of the 2024 actuarial valuations indicate that aggregate actuarial accrued liabilities are 75% covered by actuarial valuation assets. This result includes the 291 local police and fire pension and relief funds which are closed to new hires and for which LOPFI also serves as administrative agent. Continued receipt of computed employer and member contributions will improve this financial condition and allow LOPFI to continue to operate in sound condition in accordance with the actuarial principles of level cost financing.

The valuations were based upon data furnished to us concerning active and retired members and System assets as of December 31, 2024. The cooperation of the Executive Director and the LOPFI staff in furnishing the materials required for these valuations is acknowledged with appreciation. We checked for internal and year-to-year consistency, but did not audit the data. We are not responsible for the accuracy or completeness of the data provided by LOPFI staff.

The actuarial methods and assumptions used in making the valuations are shown in Section E of this report. The December 31, 2024 valuation was based upon demographic assumptions that were recommended in connection with a study of experience covering the period from January 1, 2017 through December 31, 2020, and the economic assumptions adopted by the Board in March 2022. These assumptions were established by the Board after consulting with the actuary as outlined in A.C.A. 24-10-205(a)(1). The combined effect of the assumptions, excluding prescribed assumptions or methods set by law, is expected to have no significant bias (i.e., not significantly optimistic or pessimistic). The actuarial assumptions and methods used for funding purposes meet the parameters set by Actuarial Standards of Practice.

To the best of our knowledge, this report is complete and accurate and was made in accordance with standards of practice promulgated by the Actuarial Standards Board of the American Academy of Actuaries and in conformance with Title 24 of the Arkansas Code, which gives the Board the authority to adopt the assumptions used in actuarial valuations. The Board has committed to an ongoing review of the actuarial assumptions. In our opinion, the assumptions used for the valuation produce results which, individually and in the aggregate, are reasonable.

Note that other assumptions and methods could also be reasonable and could result in materially different results. In addition, because it is not possible or practical to consider every possible contingency, we may use summary information, estimates or simplifications of calculations to facilitate the modeling of future events. We may also exclude factors or data that are deemed to be immaterial. Each actuarial valuation takes into account all prior differences between actual and assumed experience in each risk area and adjusts the contribution rates as needed.

Please be aware that future actuarial measurements may differ significantly from the current measurements presented in this report due to such factors as: plan experience differing from that anticipated by the economic and demographic assumptions; changes in economic or demographic assumptions; increases or decreases expected as part of the natural operation of the methodology used for these measurements (such as the end of an amortization period or additional cost or contribution requirements based on the plan's funded status); and changes in plan provisions or applicable law. Due to the limited scope of the actuary's assignment, the actuary did not perform an analysis of the potential range of such future measurements.

On the basis of the December 31, 2024 actuarial valuations and the benefits and contribution rates then in effect, it is our opinion that the Arkansas Local Police and Fire Retirement System continues to satisfy the general financial objective of level contribution financing.

We have assessed that the contribution rates under the current funding policy are reasonable Actuarially Determined Employer Contributions (ADECs) and they are consistent with the plan accumulating adequate assets to make benefit payments when due.

The contribution rate in this report is determined using the actuarial assumptions and methods disclosed in Section E of this report. This report includes risk metrics on pages B-18 through B-21, but does not include a more robust assessment of the risks of future experience not meeting the actuarial assumptions. Additional assessment of risks was outside the scope of this assignment. We encourage a review and assessment of investment and other significant risks that may have a material effect on the plan's financial condition.

This report was prepared using our proprietary valuation model and related software which, in our professional judgment, has the capability to provide results that are consistent with the purposes of the valuation and has no material limitations or known weaknesses. We performed tests to ensure that the model reasonably represents that which is intended to be modeled.

This valuation assumed the continuing ability of the plan sponsor to make contributions necessary to fund this plan. A determination regarding whether or not the plan sponsor is actually able to do so is outside our scope of expertise and was not performed.

The actuaries who prepared this report have substantial experience valuing public employee retirement systems and are independent of the plan sponsor. Heidi G. Barry and Casey T. Ahlbrandt-Rains are Members of the American Academy of Actuaries (MAAA) and meet the Qualification Standards of the American Academy of Actuaries to render the actuarial opinions contained herein.

If you have any questions concerning this report or LOPFI in general, please contact the LOPFI office.

Respectfully submitted,
Gabriel, Roeder, Smith & Company

SECTION A

EXECUTIVE SUMMARY

Executive Summary

Comments

Comment 1: The December 31, 2024 actuarial valuations establish employer contribution rates for the fiscal year beginning in calendar year 2026. Contribution rates for 302 paid service departments were computed. In addition, Local Pension and Relief Fund departments under LOPFI administration were included to develop employer contribution rates for affected departments. The uniform contribution rate is 24.50% and results in a 16.0-year amortization period. This rate reflects the Board policy of increasing all individual location employer rates by 1% of pay until all or most employer rates can be merged into a single uniform paid service employer rate. The Board policy also reflects a maximum employer contribution rate of 24.50% for calendar year 2026. Beginning with the contributions for calendar year 2026, the uniform rate is set equal to the maximum rate.

For Benefit Program 2 paid service departments participating in LOPFI, the uniform rate is the Benefit Program 1 rate plus a surcharge of 2.50%. Beginning with the contributions for calendar year 2026, there is no longer a surcharge for Benefit Program 2 employers with members covered by Social Security.

Comment 2: Due to changes enacted in the 2007 Session of the Arkansas General Assembly, all Benefit Program 3 volunteer service departments participating in LOPFI are charged a uniform rate for the calendar year. For calendar year 2026, that rate is \$75.00 per member per month (\$6.50 per member per month after allocation of Premium Tax money) which results in a 14.7-year amortization period. This rate was computed as \$60.00 (\$6.00 per member per month after allocation of Premium Tax money) in the prior valuation which resulted in a 28.5-year amortization period. For Benefit Program 4 volunteer service departments participating in LOPFI, the uniform rate is the Benefit Program 3 rate plus a surcharge of \$20.00.

Comment 3: Overall experience for the year ending December 31, 2024 was unfavorable, primarily as a result of larger payroll increases than expected. The fair value rate of return for the year ended December 31, 2024 was 14.9% while the recognized rate of return on the actuarial value of assets was 8.2%, which partially offset losses resulting from payroll increases. The net experience losses totaled \$31.7 million or 0.7% of the actuarial accrued liabilities (see page B-17).

Comment 4: The ratio of actuarial value of assets to fair value of assets is currently 97.7%, as the fair value of assets exceeded the actuarial value of assets by \$85.6 million. If near-term experience matches valuation expectations, in particular that fair value returns of 7.25% are achieved each year for the next four years, the phase-in of these yet-to-be-recognized gains will result in accelerated funding progress on an actuarial basis.

Comment 5: Actuarial accrued liabilities, including both LOPFI and Local Pension and Relief Funds under LOPFI administration, totaled \$4.765 billion while actuarial valuation assets totaled \$3.582 billion. Hence, actuarial accrued liabilities are 75% covered by actuarial valuation assets as of December 31, 2024. Excluding the Local Funds, paid actuarial accrued liabilities are 77% covered by actuarial valuation assets.

Comment 6: There were no assumption changes, method changes or benefit provision changes for the December 31, 2024 actuarial valuation.

Executive Summary

Recommendation and Conclusion

Recommendation: We recommend that the Section 24-10-405(h)(1) limits be removed (or at least increased). This limit hinders the complete implementation of the single paid service employer rate and may, over the long run, impair the ability to maintain a sound retirement plan.

Conclusion: The Retirement System's financial objective is to meet long-term benefit obligations through contributions that remain approximately level from year-to-year as a percent of active member payroll. Continued receipt of these contributions is the best guarantee that the Retirement System will be able to pay all promised benefits when due.

Executive Summary – Other Observations

General Implications of Contribution Allocation Procedure or Funding Policy on Future Expected Plan Contributions and Funded Status

Given the plan's contribution allocation procedure, if all actuarial assumptions are met (including the assumption of the plan earning 7.25% on the actuarial value of assets), it is expected that:

- 1) The employer normal cost is sufficient to cover the cost of benefits accruing each year;
- 2) The unfunded actuarial accrued liabilities will be fully amortized after 16.0 years for paid service and 14.7 years for volunteer service; and
- 3) The funded status of the plan will increase gradually towards a 100% funded ratio.

Limitations of Funded Status Measurements

Unless otherwise indicated, a funded status measurement presented in this report is based upon the actuarial accrued liability and the actuarial value of assets. Unless otherwise indicated, with regard to any funded status measurements presented in this report:

- 1) The measurement is inappropriate for assessing the sufficiency of plan assets to cover the estimated cost of settling the plan's benefit obligations; in other words, of transferring the obligations to an unrelated third party in an arm's length fair value type transaction.
- 2) The measurement is dependent upon the actuarial cost method which, in combination with the plan's amortization policy, affects the timing and amounts of future contributions. A funded status measurement in this report of 100% is not synonymous with no required future contributions. If the funded status were 100%, the plan would still require future normal cost contributions (i.e., contributions to cover the cost of the active membership accruing an additional year of service credit).
- 3) The measurement would produce a different result if the fair value of assets were used instead of the actuarial value of assets, unless the fair value of assets is used in the measurement.

Limitations of Project Scope

Actuarial standards do not require the actuary to evaluate the ability of the plan sponsor or other contributing entity to make required contributions to the plan when due. Such an evaluation was not within the scope of this project and is not within the actuary's domain of expertise. Consequently, the actuary performed no such evaluation.

Risks to Future Employer Contribution Requirements

There are ongoing risks to future employer contribution requirements to which the Retirement System is exposed, such as:

- Actual and Assumed Investment Rate of Return;
- Actual and Assumed Wage Inflation;
- Actual and Assumed Mortality Rates; and
- Amortization Policy.

Other Results Associated with the Determination of Employer Contribution Rates Excluding Pension and Relief Funds Under LOPFI Administration

Terminated Vested Results*

The following table contains information regarding terminated vested member data used in the December 31, 2024 valuation. It includes projected benefits and the actuarial accrued liabilities associated with these benefits. The projected benefit reflects our best estimate of the ultimate benefit. The ultimate benefit will be based on the final average pay at termination.

The December 31, 2024 valuation included 10,533 terminated vested members from 888 departments.

Service Type	Number	Projected Benefits	Actuarial Accrued Liabilities	Average Age
Paid	5,608	\$ 13,842,457	\$ 114,145,446	42.3
Volunteer	4,925	5,411,317	42,378,113	51.1
Total	10,533	\$ 19,253,774	\$ 156,523,559	46.4

* The terminated vested data contains non-terminated vested members who are entitled to, but have not yet received, a refund from the System.

Active Inactive Results

Active Inactive refers to members who have terminated service with an employer, but are currently active with a different employer in LOPFI. The following table contains information regarding the active inactive member data used in the December 31, 2024 valuation. It includes the actuarial accrued liabilities associated with the service accrued from the terminated employer.

The December 31, 2024 valuation included 5,093 active inactive members from 806 departments.

Service Type	Number	Actuarial Accrued Liabilities	Average Age
Paid	2,072	\$ 102,746,331	40.1
Volunteer	3,021	8,366,955	40.7
Total	5,093	\$ 111,113,286	40.4

Other Results Associated with the Determination of Employer Contribution Rates Excluding Pension and Relief Funds Under LOPFI Administration (Concluded)

Retired Results

The following table contains information regarding retired member data used in the December 31, 2024 valuation. When a member retires, a reserve transfer is made to the Retirement Reserve Account to fully fund the liabilities associated with the benefit recipient.

The December 31, 2024 valuation included 9,502 retired members from 883 departments.

Service Type	Number	Annual Benefits	Actuarial Accrued Liabilities	Average Age at Valuation Date	Average Age at Retirement
Paid	4,829	\$ 135,625,683	\$ 1,906,204,248	60.0	52.3
Volunteer	4,673	5,788,729	71,170,990	63.5	56.0
Total	9,502	\$ 141,414,412	\$ 1,977,375,238	61.8	54.1

Deferred Retirement Option Plan (DROP) Results

The following table contains information regarding DROP member data used in the December 31, 2024 valuation. It includes current DROP account deposits, expected benefits at retirement and the actuarial accrued liabilities associated with these benefits.

The December 31, 2024 valuation included 368 DROP members from 93 departments.

Service Type	Number	Annual DROP Benefits	Expected Annual Benefits at Retirement	Actuarial Accrued Liabilities	Average Age at Valuation Date	Average Age at DROP
Paid	368	\$ 13,557,660	\$ 18,245,028	\$ 296,757,442	56.5	53.4

Derivation of Actuarial Gain (Loss) Year Ended December 31, 2024 (LOPFI and Local Plans Combined)

The actuarial gains or losses realized in the operation of the Retirement System provide an experience test. Actual experience will never (except by coincidence) coincide exactly with assumed experience. It is expected that gains and losses will cancel each other over a period of years, but sizable year-to-year fluctuations are common. Detail on the derivation of the actuarial gain (loss) is shown below, along with a year-by-year comparative schedule.

(1) UAAL at start of year	\$ 1,179,662,433
(2) Employer normal cost from last valuation	44,343,256
(3) Actual employer contributions	154,931,051
(4) Interest accrual: $(1) \times 0.07250 + [(2)-(3)] \times (0.07250/2)$	81,516,719
(5) Expected UAAL before changes: $(1) + (2) - (3) + (4)$	1,150,591,357
(6) Change from benefit changes*	264,314
(7) Change from revised actuarial assumptions	-
(8) Expected UAAL after changes	1,150,855,671
(9) Actual UAAL at end of year	1,182,556,723
(10) Gain (Loss) $(8) - (9)$	(31,701,052)
(a) demographics	(62,117,138)
(b) investment return	30,416,086
(11) Gain (Loss) as percent of actuarial accrued liabilities at start of year	\$4,492,688,851 (0.7)%

* Includes unfunded liability associated with Local Pension Funds added during the year.

Valuation Date December 31	Actuarial Gain (Loss) as a Percentage of Beginning Accrued Liabilities
2015	(0.3) %
2016	(0.5)
2017	(0.3)
2018	(2.6)
2019	(1.9)
2020	0.5
2021	2.4
2022	(3.1)
2023	(2.0)
2024	(0.7)

Risks Associated with Measuring the Accrued Liability and Actuarially Determined Contribution

The determination of the accrued liability and the actuarially determined contribution requires the use of assumptions regarding future economic and demographic experience. Risk measures, as illustrated in this report, are intended to aid in the understanding of the effects of future experience differing from the assumptions used in the course of the actuarial valuation. Risk measures may also help with illustrating the potential volatility in the accrued liability and the actuarially determined contribution that result from the differences between actual experience and the actuarial assumptions.

Future actuarial measurements may differ significantly from the current measurements presented in this report due to such factors as the following: plan experience differing from that anticipated by the economic or demographic assumptions; changes in economic or demographic assumptions due to changing conditions; increases or decreases expected as part of the natural operation of the methodology used for these measurements (such as the end of an amortization period, or additional cost or contribution requirements based on the Plan's funded status); and changes in plan provisions or applicable law. The scope of an actuarial valuation does not include an analysis of the potential range of such future measurements.

Examples of risk that may reasonably be anticipated to significantly affect the plan's future financial condition include:

1. **Investment Risk** – actual investment returns may differ from the expected returns;
2. **Asset/Liability Mismatch** – changes in asset values may not match changes in liabilities, thereby altering the gap between the accrued liability and assets and consequently altering the funded status and contribution requirements;
3. **Contribution Risk** – actual contributions may differ from expected future contributions. For example, actual contributions may not be made in accordance with the plan's funding policy or material changes may occur in the anticipated number of covered employees, covered payroll, or other relevant contribution base;
4. **Salary and Payroll Risk** – actual salaries and total payroll may differ from expected, resulting in actual future accrued liability and contributions differing from expected;
5. **Longevity Risk** – members may live longer or shorter than expected and receive pensions for a period of time other than assumed; and
6. **Other Demographic Risks** – members may terminate, retire or become disabled at times or with benefits other than assumed resulting in actual future accrued liability and contributions differing from expected.

The effects of certain trends in experience can generally be anticipated. For example, if the investment return since the most recent actuarial valuation is less (or more) than the assumed rate, the cost of the plan can be expected to increase (or decrease). Likewise, if longevity is improving (or worsening), increases (or decreases) in cost can be anticipated.

The timely receipt of the actuarially determined contributions is critical to support the financial health of the plan. Users of this report should be aware that contributions made at the actuarially determined rate do not necessarily guarantee benefit security.

Plan Maturity Measures

Risks facing a pension plan evolve over time. A young plan with virtually no investments and paying few benefits may experience little investment risk. An older plan with a large number of members in pay status and a significant trust may be much more exposed to investment risk. Generally accepted plan maturity measures are discussed in the following pages. A historical summary of these plan maturity measures can be found on page B-21.

Funded Ratio

The funded ratio is the most widely known measure of a plan's financial strength, but the trend in the funded ratio is much more important than the absolute ratio. The funded ratio should trend to 100%. As it approaches 100%, it is important to re-evaluate the level of investment risk in the portfolio and potentially to re-evaluate the assumed rate of return.

Ratio of Actuarial Accrued Liability to Payroll

The relationship between actuarial accrued liability and payroll is a useful indicator of the potential volatility of contributions for a fully funded plan. A funding policy that targets a funded ratio of 100% is expected to result in the ratio of assets to payroll and the ratio of liability to payroll converging over time. AAL/Payroll is expected to grow as the System matures.

The ratio of liability to payroll may also be used as a measure of sensitivity of the liability itself. For example, if the actuarial accrued liability is 2.5 times the payroll, a change in liability 2% other than assumed would equal 5% of payroll. A higher (lower) or increasing (decreasing) level of this maturity measure generally indicates a higher (lower) or increasing (decreasing) volatility in liability (and also plan sponsor contributions) as a percentage of payroll.

Ratio of Fair Value of Assets to Payroll

The relationship between assets and payroll is a useful indicator of the potential volatility of contributions. For example, if the fair value of assets is 2.0 times the payroll, a return on assets 5% different than assumed would equal 10% of payroll. A higher (lower) or increasing (decreasing) level of this maturity measure generally indicates a higher (lower) or increasing (decreasing) volatility in plan sponsor contributions as a percentage of payroll.

Ratio of Unfunded Actuarial Accrued Liability to Payroll

The ratio of unfunded liability to payroll gives an indication of the plan sponsor's ability to actually pay off the unfunded liability. The ratio of the unfunded actuarial accrued liability to payroll is expected to trend toward 0% in 16.0 years for paid participants.

Plan Maturity Measures (Concluded)

Ratio of Net Cash Flow to Fair Value of Assets

The ratio of Net External Cash Flow to assets is an important measure of sustainability. Negative ratios are common and expected for a maturing system. In the longer term, this ratio should be on the order of approximately -4%. A ratio that is significantly more negative than that for an extended period could be a leading indicator of potential exhaustion of assets.

Duration of Present Value of Future Benefits

The duration of the present value of future benefits may be used to approximate the sensitivity to a 1% change in the assumed rate of return. For example, a duration of 10 indicates that the liability would increase approximately 10% if the assumed rate of return were lowered 1%.

Additional Risk Assessment

Additional risk assessment is outside the scope of the annual actuarial valuation. Additional assessment may include scenario tests, sensitivity tests, stochastic modeling, stress tests, and a comparison of the present value of accrued benefits at low-risk discount rates with the actuarial accrued liability.

LOPFI had experience studies and/or assumption changes in these years leading to a change or "true up" in actuarial assumptions. A pattern of periodic studies is a sign of a well-run system and suggests the extent to which the liability measures the actuary provides are likely to be realistic.

+ LOPFI had benefit changes in these years. Benefit increases cause liabilities to rise; benefit decreases cause liabilities to fall. In either case, benefit changes affect the year-by-year comparability of the measures on this page.

Short-term fluctuations will occur due to experience, plan changes, and assumption and method changes. Long-term expectations are described on the prior pages.

Low-Default-Risk Obligation Measure

Introduction

In December 2021, the Actuarial Standards Board (ASB) adopted a revision to Actuarial Standard of Practice (ASOP) No. 4, Measuring Pension Obligations and Determining Pension Plan Costs or Contributions. The revised ASOP No. 4 requires the calculation and disclosure of a liability referred to by the ASOP as the “Low-Default-Risk Obligation Measure” (LDROM). The rationale that the ASB cited for the calculation and disclosure of the LDROM was included in the Transmittal Memorandum of ASOP No. 4 and is presented below (emphasis added):

“The ASB believes that the calculation and disclosure of this measure provides **appropriate, useful information for the intended user regarding the funded status of a pension plan**. The calculation and disclosure of this additional measure is **not intended to suggest that this is the “right” liability measure** for a pension plan. However, the ASB does believe that **this additional disclosure provides a more complete assessment of a plan’s funded status and provides additional information regarding the security of benefits that members have earned as of the measurement date.**”

Comparing the Accrued Liabilities and the LDROM

One of the fundamental financial objectives of LOPFI is to finance each member’s retirement benefits over the period from the member’s date of hire until the member’s projected date of retirement (entry age actuarial cost method) as a level percentage of payroll. To fulfill this objective, the discount rate that is used to value the accrued liabilities of LOPFI is set equal to the **expected return** on the System’s diversified portfolio of assets (referred to sometimes as the investment return assumption). For LOPFI, the investment return assumption is 7.25%.

The LDROM is meant to approximately represent the lump sum cost to a plan to purchase low-default-risk fixed income securities whose resulting cash flows essentially replicate in timing and amount the benefits earned (or the costs accrued) as of the measurement date. The LDROM is very dependent upon market interest rates at the time of the LDROM measurement. The lower the market interest rates, the higher the LDROM, and vice versa. The LDROM results presented in this report are based on the projected unit credit actuarial cost method and discount rates based upon the December 2024 Treasury Yield Curve Spot Rates (monthly average). The 1-, 5-, 10- and 30-year rates follow: 4.29%, 4.29%, 4.37% and 4.64%.

Low-Default-Risk Obligation Measure

Presented below are the actuarial accrued liability and the LDROM as of December 31, 2024 for LOPFI.

Totals	\$ 184,768,346	\$ 254,223,730

Commentary Regarding the LDROM

Some ways in which the LDROM can assist the LOPFI Board of Trustees in a decision-making process include:

- (1) It provides information to potentially allow for better risk management for LOPFI.
- (2) It places the appropriateness of potential employer contribution rate reductions or benefit enhancements in a better context.
- (3) It provides more complete information regarding the benefit security of the membership's benefits earned as of the measurement date.

Potentially Allows for Better Risk Management: A very useful risk metric to exhibit potential contribution rate volatility (or amortization period volatility for fixed rate plans) is the ratio of assets to payroll or AAL to payroll. How could we reduce that potential contribution rate volatility (or amortization period volatility for fixed rate plans)? The LDROM and liability driven investing (LDI) are closely related concepts.

Low-Default-Risk Obligation Measure

Places the Appropriateness of Potential Employer Contribution Rate Reductions or Benefit

Enhancements in a Better Context: Many PERS have adopted a funding policy. Many funding policies already take into account the System's funded ratio (based upon the AAL) when considering whether to allow for benefit enhancements or contribution rate reductions. For example, a System may not allow for a benefit enhancement if the funded ratio does not exceed a certain threshold. Similarly, a System may not allow for an employer contribution rate reduction in some circumstances. For example, a reduction to the employer normal cost contribution may not be allowed until the System reaches a funded ratio of 120%. Given the fact that most criteria are based upon the expectation of earning the investment return assumption, a System may want to consider extending these criteria to a funded ratio based upon the LDROM in addition to the AAL.

Provides more Complete Information Regarding the Benefit Security of the Membership's Benefits

Earned as of the Measurement Date: Too often, a high funded ratio (e.g., 100% funded) on an AAL basis is interpreted as benefit security for the participants. The fact that this funded ratio is based upon an expected measure is many times overlooked. If the AAL and LDROM measures are relatively close, then the System at least has the opportunity to make benefits payable in the future more secure.

* The Total Monthly Employer Rate is the fixed monthly dollar amount charged to the Employer to cover Local Plan unfunded actuarial accrued liabilities.

Due to extreme uncertainty in financial markets at this time, the employer contribution established for calendar year 2026 will not be lower than the amount in effect for calendar year 2025.

* The Total Monthly Employer Rate is the fixed monthly dollar amount charged to the Employer to cover Local Plan unfunded actuarial accrued liabilities.

Due to extreme uncertainty in financial markets at this time, the employer contribution established for calendar year 2026 will not be lower than the amount in effect for calendar year 2025.

Amortized over multiple layers ranging from 1-5 years.

- (1) These results assume contributions begin January 1, 2026 and are applicable in periods where no active members are reported.
- (2) Departments currently with their reported assets exceeding their actuarial accrued liabilities could still be liable for contributions at a later date, depending upon future economic and demographic experience.
- (3) These departments were identified for inclusion in this calculation by the LOPFI Staff.
- (4) New calculations are needed, as of December 31, 2025, for any of these departments that again are without active members.

SECTION C

BENEFIT PROVISIONS AND VALUATION DATA

Arkansas Local Police and Fire Retirement System

Brief Summary as of December 31, 2024 of LOPFI Coverage for *BENEFIT PROGRAM 1 PAID SERVICE*

Benefits and Conditions Evaluated and/or Considered (Section References are to Arkansas Code of 1987, Including Amendments from 2025 General Assembly Session)

Voluntary Retirement. Section 24-10-604. A member may retire with an age & service annuity after both (i) completing 5 years (10 years for members hired on or after July 1, 2013) of credited service, and (ii) attaining his or her normal retirement age. The normal retirement age is age 60 for a member with less than 20 years credited service, age 55 for a member with at least 20 years credited service or any age for a member with 28 or more years of credited service.

Compulsory Retirement. Section 24-10-605. Established by each employer.

Paid Service. Section 24-10-102(13). Covered employment which is half-time employment or more, and for which a minimum dollar amount is paid. For each calendar month in 1981, the minimum is \$500 for the month. For each later calendar year, the \$500 is indexed for inflation (Consumer Price Index). Accordingly, the monthly minimum during 2024 was \$1,771.

Volunteer Service. Section 24-10-102(14). Covered employment which cannot be classified as Paid Service.

Final Average Pay. Section 24-10-102(16)(A). The average of a member's monthly pay during the period of 36 consecutive months of credited Paid Service producing the highest monthly average, which period is contained within the 120 consecutive months of credited Paid Service immediately preceding retirement. Not applicable to Volunteer Service.

Age & Service Annuity. Section 24-10-602. The annuity, payable monthly for life, equals a specified amount multiplied by the member's number of years of credited service. The amount depends upon the conditions related to covered employment:

- A. **Paid Service Not Covered by Social Security.** For each year of such service, 3.00% of the member's final average pay.
- B. **Paid Service Also Covered by Social Security.** For each year of such service, 2.00% of the member's final average pay. In addition, there is a temporary annuity equal to 1.0% of the member's final average pay for each year of service, payable to normal Social Security retirement age.
- C. At time of retirement, the total of A plus B cannot exceed 100% of final average pay.

Early Annuity. Section 24-10-606. A member may retire with an early annuity after both (i) completing 20 years of credited service, and (ii) attaining age 50 or (iii) after completing 25 years of credited paid service. The early annuity amount, payable monthly for life, is computed in the same manner as an age & service annuity, based upon his or her service and pay record to time of early retirement, but reduced to reflect the fact that his or her age when payments begin is younger than his or her normal retirement age. The amount of the reduction is 1/2 of 1% (.005) for each month his or her age at early retirement is younger than his or her normal retirement age (age 55 for members with 25 years of credited paid service).

Vested Termination Annuity. Section 24-10-611. If a member leaves LOPFI-covered employment (i) before attaining his or her early retirement age, and (ii) after completing 5 years (10 years for members hired on or after July 1, 2013) of credited service, he or she becomes eligible for a vested termination annuity; provided he or she lives to his or her normal retirement age and does not withdraw his or her accumulated contributions. The vested annuity amount, payable monthly for life from his or her normal retirement age, is computed in the same manner as an age & service annuity, based upon his or her service and pay record to time of leaving LOPFI coverage.

Non-Duty Disability Annuity. Section 24-10-607(a)(1)(A). A member with 5 or more years (10 or more years for members hired on or after July 1, 2013) of credited service who becomes totally and permanently disabled from other than duty-connected causes receives a non-duty disability annuity computed in the same manner as an age & service annuity, based upon his or her service and pay record to time of disability.

Duty Disability Annuity. Section 24-10-607(c)(1)(A). A member who becomes totally and permanently disabled from duty-connected causes receives a duty disability annuity computed in the same manner as an age & service annuity, based upon his or her service and pay record to time of disability.

The minimum annuity payable is 65% of the member's final average pay for duty disability retirements approved prior to April 1, 2021.

An approved duty disability retirement that is effective on or after April 1, 2021, shall be classified as catastrophic duty disability, hazardous duty disability, or ordinary duty disability in accordance with the criteria in the rules for disability retirement established by the board.

The minimum annuity payable to:

- (i) A catastrophic duty disability retiree shall be an annuity based on twenty-eight (28) years of accrued paid service credit;
- (ii) A hazardous duty disability retiree shall be sixty-five percent (65%) of the final average pay of the member; and
- (iii) An ordinary duty disability retiree shall be fifteen percent (15%) of the final average pay of the member.

Non-Duty Death-in-Service. Paid Member. Section 24-10-608(a)(1). Upon the death, from other than duty-connected causes, of a Paid Service member who had completed 5 years (10 years for members hired on or after July 1, 2013) of paid service, his or her eligible surviving dependents receive the following benefits:

- (a) The surviving spouse receives an annuity equal to the Option B50 annuity (joint and 50% survivor benefit) computed based upon the deceased member's service (and pay) record to time of death. Minimum of 20% of member's final average pay, or \$125 monthly if greater.
- (b) While a spouse benefit is payable, each dependent child under age 18 (age 23 if full time student) receives 10% of member's final average pay, or \$25 monthly if greater. The totals for 4 or more children cannot exceed 30% of final average pay, or \$125 monthly if greater.
- (c) While no spouse benefit is payable, each dependent child under age 18 (age 23 if full time student) receives 20% of member's final average pay, or \$25 monthly if greater. The total for 3 or more children cannot exceed 50% of final average pay, or \$125 monthly if greater.
- (d) If there is neither spouse nor child at time of member's death, each dependent parent receives 20% of final average pay.

Duty Death-in-Service. Section 24-10-608(b)(1). Upon the death of a Paid Service member from duty-connected causes, regardless of length of service, his or her eligible surviving dependents receive the same benefits as for Non-Duty Death, except that if credited service at time of death is less than 25 years, credited service is increased to 25 years.

Benefit Changes after Retirement. Section 24-10-612. There is an annual redetermination of monthly benefit amount, beginning the July 1 following 12 months of retirement. The redetermined amount is 3.0% of the monthly benefit from the preceding July.

Member Contributions. Sections 24-10-404 and 24-10-613. Each member contributes 9.5% of his or her covered pay if his or her covered employment is resulting in Paid Service credit and is not covered by Social Security. For other covered employment conditions, each member contributes 3.5% of his or her covered pay. Individual member deposit accounts do not receive interest credit. If a member leaves LOPFI-covered employment before an annuity is payable on his or her behalf, the member may choose to have his or her accumulated contributions refunded to him. If he or she dies, his or her accumulated contributions are refunded to his or her designated beneficiary.

Employer Contributions. Section 24-10-405. Each employer contributes the remainder amounts necessary to finance its employees' participation in LOPFI. Contributions to LOPFI are determined based upon level-rate principles, so that contribution rates do not have to increase over decades of time.

DROP (Deferred Retirement Option Plan). Sections 24-10-701 through 24-10-708. Paid service members who have attained age 55 with at least 20 years of service or members with at least 28 years of service may participate. A participant with 28 years of service will receive 75% of his or her accrued benefit at time of DROP election while in the DROP, payable into the participant's DROP account (which will be credited with 6% interest annually). A participant with less than 28 years of service will receive 72% of his or her accrued benefit at time of DROP election while in the DROP, payable into the participant's DROP account (which will be credited with 6% interest annually). The duration of participation in the DROP shall not exceed 10 years. When a member has reached year 6 of participation in the DROP, the amount of the accrued benefit at the time of DROP election shall be redetermined. The redetermined amount shall be the amount of the benefit as of the immediately preceding July 1 increased by 3%. The redetermined amount shall be payable only when the member elects to cease employment and receive a service retirement and shall not be added to the plan account. Employer and employee contributions continue and are used to finance System benefits (i.e., they are not deposited to the participant's DROP account). For additional details please refer to Arkansas Code, Title 24, Chapter 10, Subchapter 7.

4,200	2,520	60
4,800	2,880	60

⁽¹⁾ "Final Average Pay" means the monthly average of an employee's pays during the period of 36 consecutive months when they were highest, contained within the last 120 months of paid service.

⁽²⁾ Amounts shown are rounded to the nearest dollar; actual amounts will be calculated to the nearest cent.

⁽³⁾ With 28 or more years of service the employee is eligible for normal retirement. With 20 or more years of service the employee is eligible for normal retirement at age 55. With fewer than 20 years, the eligibility age is 60.

⁽¹⁾ "Final Average Pay" means the monthly average of an employee's pays during the period of 36 consecutive months when they were highest, contained within the last 120 months of paid service.

⁽²⁾ "Estimated Social Security" means, for an employee covered by Social Security, an employee's estimated OASDI retirement benefit is based upon an estimated "average indexed monthly earnings" for an employee retiring at normal Social Security Retirement Age (SSRA). It does not include any amounts which might be payable to an eligible spouse or children. The results assume no Social Security covered earnings after retirement. Note that a member may draw a reduced Social Security benefit as early as age 62. This is an estimate. Individuals can receive an estimate from the Social Security Administration based on their actual earnings history.

⁽³⁾ Amounts shown are rounded to the nearest dollar; actual amounts will be calculated to the nearest cent.

⁽⁴⁾ With 28 or more years of service the employee is eligible for normal retirement. With 20 or more years of service the employee is eligible for normal retirement at age 55. With fewer than 20 years, the eligibility age is 60.

⁽⁵⁾ This illustration shows 2036 Social Security estimates for a participant who retires in 2024 at age 55.

⁽⁶⁾ Amounts at Social Security Retirement Age are adjusted for post-retirement increases of 3% annually from retirement to SSRA. Amounts to Social Security Retirement Age are benefits at commencement.

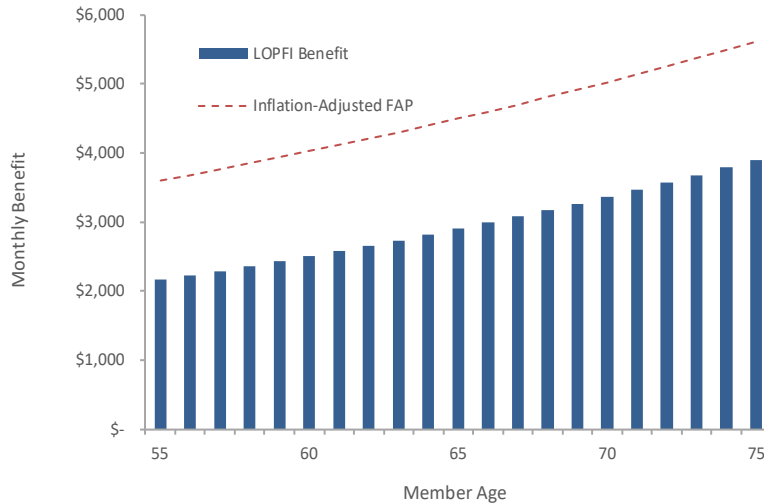

⁽⁷⁾ Amounts at Social Security Retirement Age are discounted by price inflation annually from SSRA to the retirement date and then displayed as a percent of FAP.

LOPFI with Social Security vs. LOPFI-Only Comparing Normal Benefit Amounts in Retirement

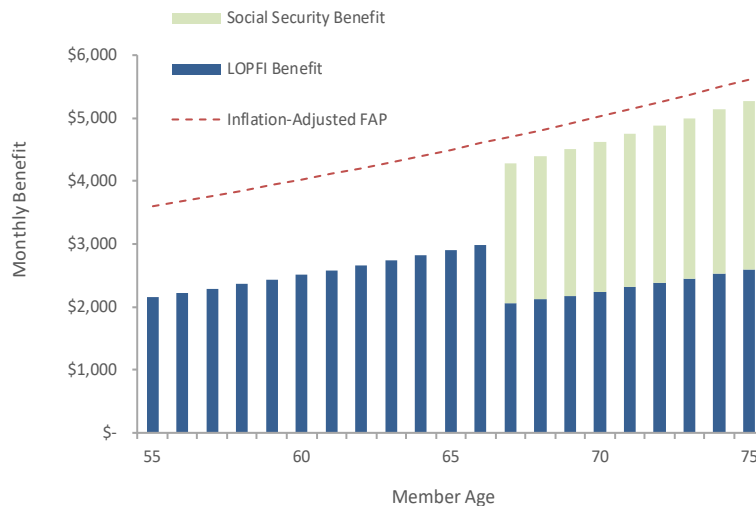

As a summary of the principles set forth in illustrations 1 and 2 on the previous pages, the graphs below show retirement benefit amounts for a LOPFI employee who retires at age 55 with 20 years of service and a monthly FAP of \$3,600 at retirement.

For Paid Service Which is Not Covered by Social Security

The LOPFI benefit for a member not covered by Social Security will replace a portion of the inflation-adjusted earnings at retirement.

For Paid Service Which is Covered by Social Security

If the member is covered by Social Security, the LOPFI benefit is reduced at full Social Security retirement age, after which the member would begin receiving an OASI benefit. The total combined benefit would serve to replace the member's inflation-adjusted final average pay at retirement from LOPFI. The provisions of Social Security coverage create an environment in which retirees may achieve full replacement of their inflation-adjusted earnings when they reach full Social Security retirement age.

Arkansas LOcal Police and Fire Retirement System
Brief Summary as of December 31, 2024 of LOPFI Coverage for
BENEFIT PROGRAM 2 PAID SERVICE
Benefits and Conditions Evaluated and/or Considered
(Section References are to Arkansas Code of 1987, Including
Amendments from 2025 General Assembly Session)

The provisions for Benefit Program 2 departments are the same as those for Benefit Program 1 departments with the following exception:

Age & Service Annuity. Section 24-10-602. The annuity, payable monthly for life, equals a specified amount multiplied by the member's number of years of credited service. The amount depends upon the conditions related to covered employment:

A. Paid Service Not Covered by Social Security.

- **Paid Service Before Adoption of Benefit Program 2.** For each year of such service, 3.00% of the member's final average pay.
- **Paid Service After Adoption of Benefit Program 2.** For each year of such service, 3.34% of the member's final average pay.
- At time of retirement, the total cannot exceed 100% of final average pay.

B. Paid Service Also Covered by Social Security.

- **Paid Service Before Adoption of Benefit Program 2.** For each year of such service, 2.00% of the member's final average pay, plus a temporary annuity equal to 1.0% of the member's final average pay for each year of service, payable to normal Social Security retirement age.
- **Paid Service After Adoption of Benefit Program 2.** For each year of such service, 3.00% of the member's final average pay.
- At time of retirement, the total cannot exceed 100% of final average pay.

Member Contributions. Sections 24-10-404 and 24-10-613. Each member contributes 9.5% of his covered pay if his covered employment is resulting in Paid Service credit. Individual member deposit accounts do not receive interest credit. If a member leaves LOPFI-covered employment before an annuity is payable on his behalf, the member may choose to have his accumulated contributions refunded to him. If he dies, his accumulated contributions are refunded to his designated beneficiary.

Arkansas LOcal Police and Fire Retirement System

Brief Summary as of December 31, 2024 of LOPFI Coverage for ***VOLUNTEER SERVICE***

Benefits and Conditions Evaluated and/or Considered (Section References are to Arkansas Code of 1987, Including Amendments from 2025 General Assembly Session)

Voluntary Retirement. Section 24-10-604. A member may retire with an age & service annuity after both (i) completing 5 years (10 years for members hired on or after July 1, 2013) of credited service, and (ii) attaining his or her normal retirement age. The normal retirement age is age 60 for a member with less than 20 years credited service, age 55 for a member with at least 20 years credited service or any age for a member with 28 or more years of credited service.

Compulsory Retirement. Section 24-10-605. Established by each employer.

Volunteer Service. Section 24-10-102(14). Covered employment which cannot be classified as Paid Service.

Age & Service Annuity. Section 24-10-102(16)(A). The annuity, payable monthly for life, equals a specified amount multiplied by the member's number of years of credited service. The amount depends upon the conditions related to covered employment.

Volunteer Service. For each year of Benefit Program 3 Volunteer Service, \$5.00 monthly, to a maximum of \$200 monthly for all volunteer service. Beginning in 2003, each July 1 these amounts are indexed for inflation by any percentage increase in the inflation index for the period from December 2003 to the December immediately preceding July 1, for members retiring in the next 12 months. Accordingly, the basic benefit factor reflected in the December 31, 2024 valuations was \$8.59 monthly.

For each year of Benefit Program 4 Volunteer Service, \$10.00 monthly, to a maximum benefit of \$400 monthly for all volunteer service. Beginning in 2013, each July 1 these amounts are indexed for inflation by any percentage increase in the inflation index for the period from December 2011 to the December immediately preceding July 1, for members retiring in the next 12 months. Accordingly, the basic benefit factor reflected in the December 31, 2024 valuations was \$13.91 monthly.

Early Annuity. Section 24-10-606. A member may retire with an early annuity after both (i) completing 20 years of credited service, and (ii) attaining age 50. The early annuity amount, payable monthly for life, is computed in the same manner as an age & service annuity, based upon his or her service record to time of early retirement, but reduced to reflect the fact that his or her age when payments begin is younger than his or her normal retirement age. The amount of the reduction is 1/2 of 1% (.005) for each month his or her age at early retirement is younger than his or her normal retirement age.

Vested Termination Annuity. Section 24-10-611. If a member leaves LOPFI-covered employment (i) before attaining his or her early retirement age, and (ii) after completing 5 years (10 years for members hired on or after July 1, 2013) of credited service, he or she becomes eligible for a vested termination annuity; provided he or she lives to his or her normal retirement age (and does not withdraw any accumulated contributions). The vested annuity amount, payable monthly for life from his or her normal retirement age, is computed in the same manner as an age & service annuity, based upon his or her service record to time of leaving LOPFI coverage.

Non-Duty Disability Annuity. Section 24-10-607(a)(1)(A). A member with 5 or more years (10 or more years for members hired on or after July 1, 2013) of credited service who becomes totally and permanently disabled from other than duty-connected causes receives a non-duty disability annuity computed in the same manner as an age & service annuity, based upon his or her service record to time of disability.

Duty Disability Annuity. Section 24-10-607(c)(1)(A). A member who becomes totally and permanently disabled from duty-connected causes receives a duty disability annuity computed in the same manner as an age & service annuity, based upon his or her service and pay record to time of disability. If the member had less than 25 years of service at time of disability, credited service is increased to 25 years.

Non-Duty Death-in-Service. Volunteer Member. Section 24-10-609. Upon the death, from other than duty-connected causes, of a Volunteer member who had completed 5 years (10 years for members hired on or after July 1, 2013) of volunteer service, or who was eligible for normal retirement, his or her eligible surviving dependents receive the following benefits:

- (a) The surviving spouse receives an annuity equal to the Option B50 annuity (joint and 50% survivor benefit) computed based upon the deceased member's service record to time of death.
- (b) Each dependent child under age 18 (age 23 if full time student) receives \$15 monthly. The totals for 3 or more children cannot exceed \$40 monthly.

Duty Death-in-Service. Section 24-10-608(b)(1). Upon the death of a Paid Service member from duty-connected causes, regardless of length of service, his or her eligible surviving dependents receive the same benefits as for Non-Duty Death, except that if credited service at the time of death is less than 25 years, credited service is increased to 25 years.

Benefit Changes after Retirement. Section 24-10-612. There is an annual redetermination of monthly benefit amount, beginning the July first following 12 months of retirement. The redetermined amount is 3.0% of the monthly benefit from the preceding July.

Member Contributions. For Volunteer Service credit, members do not contribute.

Employer Contributions. Section 24-10-405. Each employer contributes the amounts necessary to finance its employees' participation in LOPFI. Contributions to LOPFI are determined based upon level-rate principles, so that contribution rates do not have to increase over decades of time.

SECTION D

FINANCIAL PRINCIPLES

Financial Principles and Operational Techniques of LOPFI

Local Police and Fire Retirement System

Promises Made, and To Be Paid For. As each year is completed, the System in effect hands an "IOU" to each member then acquiring a year of service credit -- the "IOU" says: "The Arkansas Local Police and Fire Retirement System owes you one year's worth of retirement benefits, payments in cash commencing when you qualify for retirement."

The related **key financial questions** are:

Which generation of taxpayers contributes the money to cover the IOU? The present taxpayers, who receive the benefit of the member's present year of service? **Or the future taxpayers**, who happen to be in Arkansas at the time the IOU becomes a cash demand, years and often decades later?

LOPFI intends that this year's taxpayers contribute the money to cover the IOUs being handed out this year. By following this principle, **the employer contribution rate will remain approximately level from generation to generation** -- our children and our grandchildren will contribute the same percents of pay we contribute now.

There are systems which have a design for deferring contributions to future taxpayers lured by a lower contribution rate now and putting aside the fact that the contribution rate must relentlessly grow much greater over decades of time -- consume now, and let your children face your financial pollution after you've retired.

An inevitable by-product of the level-cost design is the accumulation of reserve assets, for decades, and the income produced when the assets are invested. **Invested assets are a by-product and not the objective.** **Investment income** becomes in effect **the third contributor** for benefits to employees, and is interlocked with the contribution amounts required from employees and employers.

Translated to actuarial terminology, this level-cost objective means that the contribution rates must total at least the following:

Normal Cost (the cost of members' service being rendered this year)

... plus ...

Interest on Unfunded Actuarial Accrued Liabilities (unfunded actuarial accrued liabilities are the difference between: liabilities for members' service already rendered; and the accrued assets of the governmental unit in the plan).

Computing Contributions to Support System Benefits. From a given schedule of benefits and from the employee data and asset data furnished, the actuary determines the contribution rates to support the benefits, by means of ***an actuarial valuation and a funding method.***

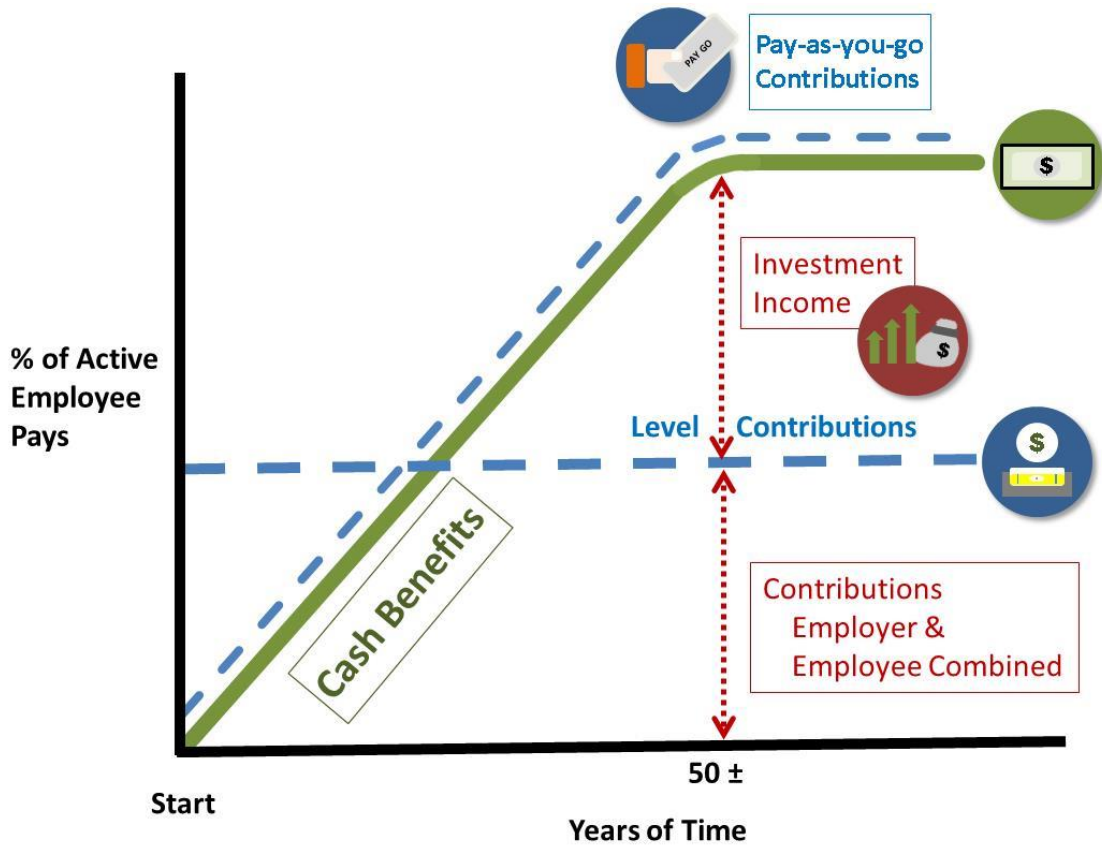

An actuarial valuation has a number of ingredients such as: the rate of investment return which plan assets will earn; the rates of withdrawal of active members who leave covered employment before qualifying for any monthly benefit; the rates of mortality; the rates of disability; the rates of pay increases; and the assumed age or ages at actual retirement.

In making an actuarial valuation, the system must assume what the above experience will be for the next year and for decades in the future. Only the subsequent actual experience of the System can indicate the degree of accuracy of the assumptions.

Reconciling Differences between Assumed Experience and Actual Experience. Once actual experience has occurred and been observed, it will not coincide exactly with assumed experience, regardless of the wisdom of the assumptions and regardless of the skill of the actuary and the calculations made. The future can be predicted with considerable but not complete precision, except that inflation seems to defy reliable prediction.

LOPFI copes with these continually changing differences by having ***annual actuarial valuations***, separately for each participating paid employer department and in aggregate for participating volunteer departments. Each annual actuarial valuation is a complete recalculation of assumed future experience, taking into account all past differences between assumed and actual experience. The result is continually changing employer contribution rates.

To avoid causing employer budget problems, LOPFI provides a maximum annual increase of one percent of payroll for any one participating employer (not including the effect of any benefit changes throughout the year).

CASH BENEFITS LINE. This relentlessly increasing line is the fundamental reality of retirement plan financing. It happens each time a new benefit is added for future retirements (and happens regardless of the design for contributing for benefits).

LEVEL CONTRIBUTION LINE. Determining the level contribution line requires detailed assumptions concerning a variety of experiences in future decades, including:

- **Economic Risk Areas**
 - Rates of investment return
 - Rates of pay increase
 - Changes in active member group size
- **Non-Economic Risk Areas**
 - Ages at actual retirement
 - Rates of mortality
 - Rates of withdrawal of active members (turnover)
 - Rates of disability

Actuarial Valuation Process

The **actuarial valuation** is the mathematical process by which the contribution rate is determined, and the flow of activity constituting the valuation may be summarized as follows:

- A. **Covered people data**, furnished by plan administrator, including:
 - Retired lives now receiving benefits
 - Former employees with vested benefits not yet payable
 - Active employees
- + B. **Asset data** (cash & investments), furnished by plan administrator
- + C. **Assumptions concerning future financial experiences in various risk areas**, which assumptions are established by the Board of Trustees after consulting with the actuary
- + D. **The funding method** for determining employer contributions (the long-term, planned pattern for employer contributions)
- + E. **Mathematically combining the assumptions, the funding method, and the data**
- = F. Determination of:

Plan financial position

and/or **New Employer Contribution Rate**

SECTION E

SUMMARY OF ACTUARIAL ASSUMPTIONS AND METHODS

Summary of Assumptions Used for LOPFI Actuarial Valuations Assumptions Adopted by Board of Trustees After Consulting with Actuary

The actuarial assumptions used in making the valuations are shown in this section of the report. The assumptions are established by the Board after consulting with the actuary as outlined in A.C.A. 24-10-205(a)(1).

ECONOMIC ASSUMPTIONS -----

The investment return rate used in the valuation was 7.25% per year, compounded annually (net after administrative expenses). This rate of return is not the assumed real rate of return. The real rate of return is defined to be the portion of investment return which is more than the wage inflation rate. With a 3.00% wage inflation assumption, the 7.25% investment return rate translates to an assumed real rate of return of 4.25%.

Price inflation was assumed to be 2.25% a year. This assumption was utilized to increase the basic benefit factor for volunteer members.

Pay increase assumptions for individual active members are summarized in Schedule A-5. Part of the assumption for each age is for a merit and/or seniority increase, and the other 3.00% recognizes wage inflation.

Total active member payroll is assumed to increase 3.00% a year, which is the portion of the individual pay increase assumptions attributable to wage inflation.

The number of active members is assumed to remain constant at the present level of LOPFI active members.

NON-ECONOMIC ASSUMPTIONS -----

The mortality tables used to measure retired life mortality were the Pub-2010 Amount-Weighted General Below Median Income Healthy Retiree tables, set forward one year for males, and two years for females. The disability post-retirement mortality tables used were the Pub-2010 Amount-Weighted General Disabled Retiree tables for males and females. The death-in-service mortality tables used were the Pub-2010 Amount-Weighted General Below Median Income Employee tables for males and females. Fifty percent of deaths-in-service were assumed to be duty related. The tables were adjusted for fully generational mortality improvements using Scale MP-2020. Related retired life mortality values are shown in Schedule A-1.

The probabilities of retirement for members eligible to retire are shown in Schedule A-3.

The probabilities of withdrawal from service are summarized in Schedule A-4, and the **probabilities of disability** are summarized in Schedule A-2.

An individual entry age actuarial cost method of valuation was used in determining age & service allowance normal costs and the allocation of actuarial present values between service rendered before and after the valuation date. The entry-age actuarial cost method has the following characteristics:

- (i) The annual normal costs for each individual active member, payable from the member's actual date of employment to the member's projected date of retirement are sufficient to accumulate the actuarial present value of the member's benefit at the time of retirement; and
- (ii) Each annual normal cost is (a) a constant percentage of the member's year-by-year projected covered pay for paid service plans, or (b) an increasing dollar amount for volunteer service plans.

Differences in the past between assumed experience and actual experience ("actuarial gains and losses") are inevitable and become part of accrued liabilities. In LOPFI, cumulative actuarial losses and gains are the same as unfunded (or overfunded) accrued liabilities.

Unfunded accrued liabilities are amortized to produce contribution amounts (principal and interest) which are (a) level percent of payroll contributions over a period of future years for paid service plans, or (b) increasing dollar amounts for volunteer service plans.

For Benefit Program 3 volunteer service plans, the contribution rates from the December 31, 2002 valuation were developed based on a \$5.00 per month basic benefit factor. This factor is \$8.59 effective July 1, 2025 and is assumed to increase at the assumed rate of price inflation in future years. For Benefit Program 4 volunteer service plans, the contribution rates from the December 31, 2012 valuation were developed based on a \$10.00 per month basic benefit factor. This factor is \$13.91 effective July 1, 2025 and is assumed to increase at the assumed rate of price inflation in future years.

OTHER TECHNICAL ASSUMPTIONS -----

Decrements are assumed to occur at the middle of the valuation year.

The probability of being married, for death-in-service benefits, is assumed to be 90%.

Active members who are eligible to participate in the DROP are assumed to participate in the DROP program in such a manner that is the most advantageous to them. We assume on average the DROP duration for members currently in the DROP is 5 years.

Future service credit is always assumed to accrue at the rate of 1 year of credit every 12 calendar months. Lower service accrual rates (service breaks or less-than-full-time employment) or higher service accrual rates (addition of military credit or reinstatement of prior service) are reflected as they are reported. Any lower or higher accrual rates may result in small financial gains or losses when reported.

The form of benefit payment assumed in the valuation for paid service and volunteer service plans is the Five Year Certain and Life Option. For local plans under LOPFI administration, the assumed form of benefit payment is 100% joint and survivor for police plans and the Life Option for fire plans. For local fire plans under LOPFI administration who have adopted Act 397, the assumed form of benefit payment is 100% joint and survivor.

Employer contribution dollars were assumed to be ***paid in equal installments*** throughout the employer fiscal year.

Present assets (cash & investments) were used based on a smoothed fair value.

The data about persons now covered and about present assets were furnished by the System's administrative staff. Although examined for general reasonableness, the data was not audited by the Actuary.

Future actuarial measurements may differ significantly from the current measurements presented in this report due to such factors as: plan experience differing from that anticipated by the economic and demographic assumptions; changes in economic or demographic assumptions; increases or decreases expected as part of the natural operation of the methodology used for these measurements (such as the end of an amortization period or additional cost or contribution requirements based on the plan's funded status); and changes in plan provisions or applicable law. Due to the limited scope of the actuary's assignment, the actuary did not perform an analysis of the potential range of such future measurements.

Illustration of Computed Employer Contributions

16.0-Year Closed Amortization Period

LOPFI Paid Service (Based on Projected Future Payroll)

Year Ended December 31,	Illustrative Payroll	Normal Cost	Payment for Amortization of UAL	Computed Employer Rate	Annual Employer Dollar Contribution

This illustration is not intended to exactly predict future employer contributions, but instead is intended to illustrate the general trend of future contributions based upon current benefit structure and assumed future economic and demographic activity. It is unlikely that future contributions will match exactly for any given year those rates shown above.

@ Basic benefit factor - \$5.00 per month for each year of service beginning July 1, 2003. Increased by price inflation on July 1, 2004 and every July 1 thereafter. This factor is \$8.59 effective July 1, 2025. For purposes for this illustration, the factor was assumed to increase by 2.25% a year, compounded.

This illustration is not intended to exactly predict future employer contributions, but instead is intended to illustrate the general trend of future contributions based upon current benefit structure and assumed future economic and demographic activity. It is unlikely that future contributions will match exactly for any given year those rates shown above.

Schedule A-2

Probabilities of Disability Retirement

Paid Service Members (First Used for December 31, 2021 Valuations)

Sample Ages	Percent Becoming Disabled within Next Year	
	Non-Duty	Duty
20	0.10 %	0.13 %
25	0.10	0.13
30	0.12	0.16
35	0.17	0.22
40	0.26	0.34
45	0.40	0.52
50	0.68	0.89
55	1.18	1.55
60	1.77	2.32

Given the relatively small number of disabilities in total and the sensitivity of the results to the actual disability benefit that members would qualify for, we have assumed the minimum disability benefit would be based on duty disabilities being split 1/3 catastrophic, 1/3 hazardous and 1/3 ordinary duty. The resulting weighted minimum disability benefit is approximately 55% of final average pay. This assumption will be reviewed and updated as experience emerges.

Volunteer Service Members (First Used for December 31, 2021 Valuations)

65		50		
66		60		
67		70		
68		80		
69		90		
70+		100		

A member was assumed eligible for retirement after attaining age 55 with 20 years of service or age 60 with 5 years of service or any age with 28 or more years of service. A member was assumed to retire with 100% probability at 34 or more years of service credit.

A member was assumed eligible for a reduced benefit after attaining age 50 with 20 or more years of service or any age with 25 or more years of paid service credit.

The probabilities of retirement shown above represent ultimate termination of employment (whether or not the member participates in the DROP).

We assume on average the DROP duration (for members currently in the DROP) is 5 years. Active members who are eligible to participate in the DROP are assumed to participate in the DROP program in such a manner that is the most advantageous to them.

Schedule A-3

Probabilities of Retirement for Members Eligible to Retire (Concluded)

(First Used for December 31, 2021 Valuations)

Volunteer Service Members

Retirement Ages	Percents of Active Members Retiring within Next Year	
	Early	Normal
Under 50		15 %
50-54	2.5 %	15
55-59		15
60-64		10
65-69		15
70-74		15
75+		100

A member was assumed to be eligible for retirement after 28 years of service, attaining age 55 with 20 years of service, or age 60 with 5 years of service.

A member was assumed eligible for a reduced benefit after attaining age 50 with 20 or more years of service.
